UNIT II- Digital Marketing

Purchase behaviour of consumers in digital marketing format:

Consumer purchase behavior in digital marketing is influenced by online research, brand interactions, and the overall digital experience. Factors like website usability, personalization, and the ability to compare products easily play a significant role in shaping consumer decisions.

1. Digital Touchpoints and Consumer Journey:

- Awareness:

Consumers often begin their purchase journey with online searches or social media browsing.

- Consideration:

They then explore product information, read reviews, and compare options on various websites and platforms.

- Decision:

Ultimately, consumers make a purchase based on their evaluation of product information, price, and the overall online experience.

2. Key Factors Influencing Purchase Behavior:

- Website Usability:

A user-friendly website with clear navigation and product information is crucial for attracting and retaining customers.

- Personalization:

Tailoring the online experience based on user preferences and past behavior can significantly impact purchase decisions.

- Reviews and Social Proof:

Online reviews and social media endorsements play a vital role in building trust and influencing purchase choices.

- Mobile Optimization:

With the increasing use of mobile devices, a seamless mobile shopping experience is essential for reaching and engaging consumers.

- Promotions and Discounts:

Special offers, discounts, and promotional campaigns can incentivize consumers to make a purchase.

- Payment Options:

Providing a variety of secure and convenient payment options is important for facilitating transactions.

3. Types of Consumers Buying Behaviour in Digital Marketing:

- Impulse Purchases:

Some consumers make quick, spontaneous purchases based on emotions or appealing offers.

- Habitual Purchases:

Consumers may repeatedly buy products they are familiar with or have a strong preference for.

- Complex Purchases:

High-involvement purchases, like electronics or appliances, involve more research and comparison before buying.

- Variety-Seeking Purchases:

Consumers may switch between different brands or products for novelty or to explore new options.

4. Impact of Digital Marketing:

- Digital marketing strategies, including social media marketing, email marketing, and search engine optimization, can significantly influence consumer behaviour at each stage of the buying process.
- By understanding consumer behaviour and leveraging digital marketing tools, businesses can effectively target their audience, increase brand awareness, and drive sales.

Online Customer Expectations

Online customers expect a seamless, personalized, and trustworthy experience. The Customers want easy navigation, secure transactions, quick responses, and helpful support across all devices. Meeting these expectations requires understanding their needs, offering tailored solutions, and prioritizing transparency and security.

Here's a more detailed breakdown:

1. Seamless and User-Friendly Experience:

- Easy Navigation:

Customers expect to find what they're looking for quickly and easily on a website or app.

- Mobile Optimization:

A smooth and responsive experience across all devices, especially mobile, is crucial.

- Intuitive Checkout:

A simple and secure checkout process is essential for completing purchases.

- Fast Loading Times:

Slow loading pages can frustrate customers and lead to cart abandonment.

- Clear Information:

Customers need access to accurate and readily available product information.

2. Personalized and Relevant Interactions:

- Tailored Recommendations:

Personalized product suggestions based on browsing history and preferences enhance the shopping experience.

- Customized Content:

Content that is relevant to individual customers' needs and interests builds engagement.

- Targeted Offers:

Promotions and discounts tailored to specific customer segments can drive conversions.

3. Excellent Customer Service:

- Multiple Contact Channels: Offering various support options like live chat, email, and phone is important.
- Quick Response Times: Customers expect prompt responses to their inquiries and issues.
- Efficient Issue Resolution: Fast and effective solutions to problems are crucial for customer satisfaction.
- Personalized Support: Addressing customers by name and showing empathy can create a positive experience.
- Transparency and Honesty: Customers value honesty and transparency in all interactions.

4. Security and Trust:

- Data Protection: Customers expect their personal data to be protected and secure.
- Secure Payment Options: Offering a variety of secure payment methods is essential.
- Transparent Policies: Clearly communicated privacy policies and terms of service build trust.

5. Continuous Improvement:

- Feedback Mechanisms:

Providing channels for customers to offer feedback and suggestions is important.

- Proactive Communication:

Keeping customers informed about order updates and potential issues is crucial.

- Anticipating Needs:

Going above and beyond to anticipate and fulfill customer needs can create delightful experiences.

B2C Buyer Decision Process

The B2C (business-to-consumer) buyer decision process outlines the steps consumers take when purchasing products or services. It typically involves five stages: need recognition, information search, evaluation of alternatives, purchase decision, and post-purchase evaluation. Understanding this process is crucial for businesses to effectively target and engage consumers.

Here's a more detailed breakdown of each stage:

1. 1. Need Recognition:

This is the initial stage where the consumer identifies a problem or a need that can be satisfied by a product or service. This recognition can be triggered by internal stimuli (like hunger) or external stimuli (like an advertisement).

2. 2. Information Search:

Once a need is recognized, the consumer begins to search for information about potential solutions. This can involve both internal search (recalling past experiences) and external search (researching online, asking friends, or consulting reviews).

3. 3. Evaluation of Alternatives:

After gathering information, the consumer evaluates the various options available. This involves comparing different products or services based on factors like price, quality, features, and brand reputation.

4. 4. Purchase Decision:

This stage involves the consumer making the final decision to purchase a specific product or service. The decision is influenced by the evaluation of alternatives, as well as other factors like promotions, personal preferences, and availability.

5. 5. Post-Purchase Evaluation:

Following the purchase, the consumer evaluates their satisfaction with the product or service. This evaluation can lead to either positive (continued loyalty) or negative (dissatisfaction, negative reviews) outcomes.

Factors Influencing B2C Decisions:

- **Psychological factors:** Motivation, perception, learning, attitudes, and beliefs.
- **Personal factors:** Age, lifestyle, personality, and economic status.
- **Social factors:** Family, friends, reference groups, and social class.
- **Cultural factors:** Culture, subculture, and social class.

Key Characteristics of B2C Buying:

- **Individual decision-making:** B2C purchases are often made by individuals or couples.
- **Emotional influence:** Consumers are often driven by emotions, desires, and social factors.
- **Shorter buying cycles:** B2C purchases tend to be less complex and have shorter decision-making timelines compared to B2B.

By understanding these stages and influencing factors, businesses can tailor their marketing strategies to effectively reach and engage B2C customers.

Online B2B Buying Behaviour

B2B buying behavior is evolving towards a more digitally-driven, consumer-like experience. B2B buyers are increasingly researching and making purchases online, often preferring self-service options and rep-free experiences while also valuing personalized interactions and tailored recommendations. This shift is driven by factors like the need for convenience, value, and a user-

friendly experience, mirroring trends seen in B2C e-commerce.

Key aspects of B2B online buying behaviour:

Digital Reliance:

The internet is the primary research and comparison tool for B2B buyers, with a significant portion of the buying process influenced by online search and product discovery.

of the buying process influenced by online search and product discovery.

Rep-Assisted Digital Commerce:

While self-service is preferred, many buyers also value the support of a sales representative, especially for complex or high-value purchases.

Mobile Influence:

Mobile devices play a crucial role in the B2B buying journey, with a majority of buyers using them for initial research and inspiration.

Personalization:

Tailoring product recommendations, content, and communication to specific customer needs is becoming increasingly important for attracting and retaining B2B buyers.

Value and ROI:

B2B buyers focus on long-term value and return on investment (ROI), seeking solutions that offer tangible benefits and align with their business goals.

Risk Aversion:

B2B buyers tend to be risk-averse, prioritizing reliability, proven solutions, and established vendors, although some are open to exploring new technologies and partnerships.

Evolving Expectations:

B2B buyers expect the same level of user-friendliness and engaging online experiences they encounter in B2C e-commerce.

Importance of Existing Customers:

Nurturing existing customers through targeted promotions and personalized experiences can lead to increased sales and loyalty.

Multi-Channel Approach:

B2B companies are adopting a multi-channel approach, integrating online and offline interactions to cater to diverse buyer preferences.

Complex Decision-Making:

B2B purchases often involve multiple stakeholders and a longer decision-making process, requiring businesses to provide comprehensive information and support.

Post-Purchase Evaluation:

Building strong relationships and providing excellent post-purchase support are crucial for fostering long-term customer loyalty in the B2B space

B2B Buying Process

The B2B buying process comprises five distinct stages and is driven by the strategic decision-making necessary to run a profitable business. Let's delve into each of the stages of the B2B buying process below:

1. Recognising a Problem or Need (Awareness)

The first stage of the B2B buying process sees the business identifying a specific problem that needs resolving. Often one that needs solving to continue to grow the company. B2B buyers can trigger this first stage of recognizing a need or problem in several ways. For instance, lack of stock, unreliable suppliers, or noticing bottlenecks and inefficiency.

2. Commitment to Change

Once the organization identifies its need or problem, the next step of the B2B buying process is to commit to fixing the problem. At this point, the main focus for the buyer is usually determining the proper budget to address their needs. Then identifying whether a solution would impact other areas of the organisation.

3. Investigating, Evaluating & Comparing Solutions (Consideration)

Now the buyer is looking at their options. Generally, their first research stage will start with broad search terms as they explore their options, and then they'll turn to educational resources, reviews, case studies and testimonials.

By doing so, they can begin to filter out suppliers and solutions that don't meet their needs and start to search for more specific terms. They'll also seek to clarify desired outcomes, identify which stakeholders need to be involved, and draft an RFP to create a budget.

4. Asking Suppliers to Submit RFP

All potential suppliers now receive an opportunity to complete an [RFP](#). Also known as a request for proposal. It's a business document that announces a project and receives bids from several contractors to complete it. Responses to the RFP are evaluated against the company's specific needs and criteria so that they can choose the best solution.

5. Choosing a Supplier (Decision Stage)

Now, B2B buyers have to secure a unanimous buy-in from upper management. To persuade their c-suite managers, they'll start by collating content about the solution's pricing, ROI, and how it will improve the business's bottom line.

At this stage of the B2B buying process, buyers will contact the supplier's sales reps to ask specific questions about why they should choose your agency to solve their problem.

Influencing Factors of B2B Buying Decisions

Overall, four key factors influence the B2B buying process and propel B2B buyers toward a specific purchase decision. Let's explore them in detail below:

1. Organisational Factors

Business goals, strategies and objectives are the organization's roadmap to success. As a result, [decision-makers](#) must present a compelling reason why they believe a new purchase will help the company achieve specific goals or milestones. Buyers influenced by organizational factors want to ensure that any product or service they purchase is compatible with existing processes, technology and systems.

2. Interpersonal Factors

The type of interpersonal relationships between people in the buying centre can slow down and even restrict the buying process. That's why companies want to ensure that all members in the buying centre trust each other and operate under full disclosure together.

3. Individual Factors

Even the personalities and characteristics of people in the buying centre can affect the B2B buying process. For instance, factors like age, education, nature, employment tenure, and position within the company all play a role in influencing the buying process.

4. Environmental Factors

Naturally, as industries grow, the operational landscape becomes much more competitive. While these competitive conditions can help a company's short-term success, organizations are constantly searching for ways to differentiate themselves.

Social Media Marketing Segmentation

Social media marketing segmentation involves dividing customers into smaller, more defined groups based on shared characteristics. This allows for more targeted and effective marketing campaigns by tailoring content and messaging to resonate with specific segments. Common segmentation strategies include demographic, geographic, psychographic, and behavioural.

Types of market segmentation.

Segmentation can be approached in four keyways, depending on your objectives:

Demographic Segmentation:

This involves grouping users based on characteristics like age, gender, income, education, and occupation.

Example:

A car manufacturer targets high-income executives by offering luxury sedans and young families with spacious, affordable SUVs. Each audience feels the brand understands their unique needs.

2. Geographic segmentation.

This approach segments users based on their location, such as country, region, city, or even neighborhood.

Location-based segmentation ensures your offers resonate in local contexts.

Example:

A national retailer promotes winter jackets in colder regions and lightweight apparel in warmer climates. Urban stores highlight compact, trendy home goods, while rural locations showcase durable, family-focused products.

3. Psychographic segmentation;

This focuses on users' lifestyles, values, interests, and personality traits. Psychographics explore the “why” behind decisions, focusing on values, lifestyles, and interests.

Example:

A travel agency segments adventure travelers from luxury seekers. The former gets offers for remote trekking tours, while the latter sees curated luxury resort packages. Each group is drawn to what aligns with their values.

4. Behavioral segmentation.

This strategy groups users based on their online behavior, such as their purchase history, engagement with content, or website activity.

with content, or website activity.

Behavioral segmentation focuses on what your audience does, such as purchase habits or online interactions.

Example:

An edtech company notices that some users binge video tutorials. It targets these users with advanced learning plans and subscription offers, converting high interest into paid memberships.

Benefits of Segmentation:

Increased Relevance: Tailoring content to specific segments makes it more relevant and engaging for the audience.

Improved Targeting: Segmentation allows for more precise ad targeting, reducing wasted ad spend and improving ROI.

Enhanced Engagement: Personalized content leads to higher engagement rates (likes, comments, shares) as users feel the content is directly relevant to them.

Better Customer Insights: By analyzing how different segments respond to marketing efforts, businesses can gain valuable insights into customer behavior and preferences.

Efficient Resource Allocation: Segmentation enables businesses to allocate marketing resources more effectively by focusing on the most promising segments.

Examples of Segmentation in Action:

A clothing retailer might segment its audience by age and gender to promote different styles of clothing to different groups.

A travel agency might segment its audience by location and interests to promote specific travel packages to relevant groups.

A software company might segment its audience by job title and industry to promote different features of their product to different professional groups

Market segmentation Process:

1. **Define market.** Understand your potential customers, their needs, and your competition.
2. **Segment audience.** Choose demographic, geographic, psychographic, or behavioural criteria based on your goals.
3. **Understand segments.** Use surveys, polls, and analytics to gain deep insights into each group.
4. **Target segments.** Craft campaigns tailored to each group's preferences and pain points.
5. **Test and refine.** Continuously optimize based on results to keep your approach relevant.

Search Engine

The search engine is a sophisticated software system that enables users to search for information on the internet. It provides a list of relevant web pages, documents, images, videos, and other digital content based on a user's search query. The most popular search engine, Google, boasts a massive index of web pages and employs complex algorithms to deliver accurate and valuable results to users.

The Search Engine Process:

Search engines employ a well-defined process to index and rank web pages.

1. **Crawling:** Search engines use web crawlers, also known as bots or spiders, to systematically explore the web. These crawlers begin their journey from a set of seed URLs, which are usually established, trusted websites. They follow links from these pages to other sites, creating a web of interconnected pages.
2. **Indexing:** Once a web crawler visits a web page, it scans and processes the page's content, including text, images, and metadata. The information collected is then added to the search engine's index, a vast database that stores details about each web page.
3. **Ranking:** The real magic happens in this step. Search engine algorithms analyze the indexed web pages to determine their relevance and value for specific search queries. Factors like keyword usage, content quality, backlinks, and user engagement play a crucial role in determining a page's rank in search results.
4. **Regular Updates:** Search engines revisit web pages they've previously crawled to update their index. This ensures that search results are always up-to-date. If your webpage changes, the search engine reflects those changes in its index.

How Google discovers URLs?

The most common ways Google discovers URLs are:

- **Crawling:** Google has a fleet of web crawlers that constantly crawl the web to discover new pages.
- **Backlinks:** Google follows links from one page to another to discover new pages. This includes links on web pages, in RSS feeds, and in social media posts.
- **Sitemaps:** A sitemap is a file that lists all the pages on a website. Website owners can submit their sitemaps to Google Search Console, which helps Google to discover and index their pages more quickly.
- **User activity:** Google also uses user activity to discover new pages. For example, if a user searches for a particular query and then clicks on a link in the search results, Google may add

that page to its list of known URLs.

- **Partnerships:** Google has partnerships with other websites and organizations that share their lists of URLs with Google. This helps Google to discover pages that it might not otherwise find.

Other ways that Google discovers URLs include:

- **Browser history:** Google may use the browsing history of Chrome users to discover new pages. This is done with the user's permission.
- **Social media monitoring:** Google may monitor social media platforms to discover new pages that are being shared and discussed.

How does Google page ranking work?

- **Pay-Per-Click (PPC):**

This is the dominant model. Advertisers bid on keywords related to their products or services, and their ads appear on search engine results pages (SERPs). They only pay when a user actually clicks on their ad.

- **Pay-Per-Impression:**

Advertisers pay based on the number of times their ads are displayed, regardless of whether they are clicked.

- **Pay-Per-Lead:**

Advertisers pay when a user clicks on their ad and then completes a specific action, like filling out a form or requesting a quote.

- **Pay-Per-Sale:**

Advertisers pay when a user clicks on their ad and then makes a purchase.

- **Sponsorships:**

Some search engines offer sponsorship opportunities where companies can pay for prominent placement or branding on specific sections of the search results page.

- **Data Analytics:**

Search engines can also leverage user search data for targeted advertising, which can be sold to advertisers.

- **Content Networks:**

Search engines like Google generate revenue from their content networks where ads are displayed beyond the search engine results pages.

How search engine positioning (SEO) strategies relate to revenue models:

- **SEO and PPC:**

While SEO focuses on organic (unpaid) rankings, it can indirectly support PPC campaigns. By improving website content and user experience, SEO can make PPC ads more effective and improve click-through rates.

- **SEO and other revenue models:**

SEO efforts can also improve the effectiveness of other revenue models. For example, if a website ranks well organically for a particular product, it may also attract more leads or sales through other advertising channels.

In essence, search engines use a variety of advertising-based revenue models to monetize their traffic, and SEO plays a vital role in attracting that traffic and optimizing the performance of these revenue models.

Search engine optimization (SEO):

- **Definition:**
SEO is the process of improving a website's visibility in search engine results pages (SERPs).
- **Goal:**
The primary goal is to attract more organic (non-paid) traffic to a website by improving its ranking for relevant keywords.
- **Key Components:**
 - Keyword Research:** Identifying the terms and phrases that users type into search engines to find information related to your website.
 - On-Page Optimization:** Optimizing individual web pages, including content, title tags, meta descriptions, and images, to make them more relevant and appealing to search engines and users.
 - Off-Page Optimization:** Building a website's reputation and authority through activities like link building (getting other websites to link to yours).
 - Technical SEO:** Ensuring the website is technically sound and easy for search engines to crawl and index, including aspects like site speed, mobile-friendliness, and site structure.
- **Importance of SEO**
 - Increased Visibility:** Higher rankings in search results mean more users will see your website when they search for relevant information.
 - More Organic Traffic:** SEO helps attract a steady stream of visitors to your website without relying solely on paid advertising.
 - Credibility and Trust:** Websites that rank well in search results are often perceived as more trustworthy and authoritative.
 - Long-Term Results:** SEO efforts can lead to sustained improvements in website traffic and visibility over time.
 - Cost-Effective:** While SEO requires time and effort, it can be a more cost-effective way to drive traffic compared to paid advertising, especially in the long run.

We will cover the basics of SEO, including on-page and off-page optimization techniques that can help your website rank better on search engines.

On Page Optimization -

On-page optimization refers to the various factors you can control on your website to make it more search engine friendly. Here are some essential on-page optimization techniques you should focus on:

Keyword Research: Keywords are the foundation of SEO. You need to identify relevant keywords and phrases related to your website's content and integrate them into your content. Use tools like Google Keyword Planner or Ubersuggest to find the most popular and relevant keywords.

Title Tags: The title tag is the HTML tag that tells search engines what the page is about. Ensure that your title tag is relevant to the page's content and includes your primary keywords.

Meta Descriptions: The meta description is the short summary that appears below the title tag in search results. It should be relevant and engaging, and include your primary keywords.

Header Tags: Header tags (H1, H2, H3, etc.) are HTML tags that indicate the page's structure and content hierarchy. Use them to organize your content, highlight important topics, and include your primary keywords.

URL Structure: Your URL structure should be simple and easy to read. It should also include your primary keywords.

Content Optimization: Ensure that your website's content is high-quality, informative, and relevant to your audience. Use your primary keywords naturally and avoid keyword stuffing.

Off-Page Optimization

Off-page optimization refers to the various techniques you can use to promote your website and build links to it from other reputable websites. Here are some essential off-page optimization techniques you should focus on:

- **Link Building:** Links from other reputable websites to your website are crucial for improving your website's authority and ranking on search engines. You can build links by creating high-quality content that other websites would want to link to or by reaching out to other websites and asking them to link to your content.
- **Social Media Marketing:** Social media platforms like Facebook, Twitter, LinkedIn, and Instagram can help you reach a broader audience and promote your content. Share your content on social media, engage with your audience, and build relationships with other industry influencers.

In addition to the on-page and off-page optimization techniques mentioned in the article, there are certain practices you should avoid to ensure effective SEO.

Here are some things to avoid:

- **Keyword Stuffing:** Keyword stuffing is the practice of excessively and unnaturally inserting keywords into your content with the intention of manipulating search engine rankings. It is important to use keywords naturally and focus on providing valuable and relevant content to your audience.
- **Duplicate Content:** Publishing identical or very similar content on multiple pages of your website or across different websites can harm your SEO efforts. Search engines prefer unique and original content, so avoid duplicating content from other sources or within your own site.

- **Cloaking:** Cloaking is a deceptive technique where different content is shown to search engines and users. This violates search engine guidelines and can result in penalties. Ensure that the content presented to search engines and users is consistent.
- **Hidden Text and Links:** Hiding text or links by using techniques like white text on a white background or using tiny font sizes may seem like an attempt to manipulate search rankings. Search engines consider such practices as spam and can penalize your website.
- **Paid Links:** Buying or selling links for the sole purpose of manipulating search rankings is against search engine guidelines. Focus on building organic, high-quality links through genuine relationships and valuable content.
- **Irrelevant Backlinks:** Acquiring backlinks from unrelated or low-quality websites can have a negative impact on your SEO. Aim for backlinks from authoritative and relevant websites that are genuinely interested in your content.
- **Poor User Experience:** Search engines prioritize user experience, so it's important to ensure your website is easy to navigate, loads quickly, and provides a positive experience for visitors. Avoid intrusive pop-ups, excessive ads, and broken links that can frustrate users.
- **Neglecting Mobile Optimization:** With the increasing use of mobile devices, optimizing your website for mobile is crucial. Neglecting mobile optimization can lead to poor user experience and lower search rankings. SEO, or Search Engine Optimization, is the practice of improving a website's visibility and ranking in search engine results pages (SERPs) to attract more organic (non-paid) traffic. It involves optimizing various aspects of a website, including its content, structure, and technical elements, to make it more appealing to both users and search engines.

Display Advertising

- Display advertising is a form of online advertising that uses visual elements like images, videos, and text to promote products or services on websites, apps, and other digital platforms. It's a way to reach a broad audience and can be targeted to specific demographics, interests, or browsing behaviours. Display ads can drive immediate action, such as directing users to a landing page for further engagement or purchase.
- **Key aspects of display advertising:**
 - Visual Focus:** Unlike text-based ads, display ads rely on visual elements to capture attention and convey messages.

Placement: Display ads appear on websites, apps, and other digital platforms, often on the periphery of content or within the content itself.

Targeting: Advertisers can target specific demographics, interests, and browsing behaviours to reach the most relevant audience.

Call to Action: Display ads typically include a call to action (CTA) that encourages users to click through to a landing page for further engagement or purchase.

Flexibility: Display ads can be easily adjusted and optimized during a campaign, unlike traditional print ads, allowing for dynamic changes to visuals, CTAs, and messaging.

Reach: Display advertising can reach a vast audience through various online channels, including websites, apps, and social media platforms.

Different Formats: Display ads come in various formats, including banner ads, rich media ads (including animations and videos), and pop-up ads.

Benefits of Display Advertising:

Increased Brand Awareness: Display ads can help increase brand visibility and recognition by showcasing your brand to a wide audience.

Targeted Reach:

You can target specific demographics, interests, and behaviors, increasing the likelihood that your ads are seen by the most relevant users.

Website Traffic: Display ads can drive traffic to your website, leading to more potential customers and conversions.

Cost-Effectiveness: Compared to some other forms of advertising, display advertising can be a cost-effective way to reach a large audience.

Measurable Results: Display advertising campaigns can be tracked and measured, allowing you to analyze the performance of your ads and optimize them for better results.

Display advertising process:

1. **Define demographic:** segment the audience based on their basic demographic details like age, gender, interests, etc.
2. **Identify Target keywords:** This allows you to reach the target demographic based on selected keywords as per product or service. The display [ad network](#) will match keywords with words/phrases present in the publisher's site where ad will be displayed.
3. **Zero-in on the topic:** This feature lets allows to choose a group of websites that fit a specific topic/category within which business operates.
4. **Formulate the ideal placement:** Choose the website you want your display ads to run on. For example, if you're targeting customers of a specific car variant, you can display the ads on articles related to that model, or even on a product review page

5. **Show ads based on interest:** Google collects data on its users' behaviour, and depending on what users are searching for, you run display ads that resonate with specific interest areas. For example, a car enthusiast may be researching tires, car stereo systems, etc. Interest-based display ad targeting will place your ad on all relevant webpages.
6. **Retarget based on past behaviour:** Also known as retargeting, this display ad targeting feature lets you target users who have already visited your website, thereby reinforcing the brand's impact and recall.

Types of Display Advertising

Effective display advertising management relies on visuals to get the core message of the campaign to the audience. The aim is to make sure that users are automatically drawn to an ad when they visit a website or a social media platform. So, here are a few different options you should experiment with when outlining your display advertising management strategy.

Banner ads

Banner ads are the most common display advertising format, as they clearly stand out on any webpage. They are named after their shape, which is banner-like. They are nothing more than hyperlinked, image-based ads in the shape of a strip. They are usually placed on the top of a webpage to immediately draw the user's attention.

Rich Media

Considering that roughly 30% of Internet users find traditional banner advertising distracting, advertisers are exploring more innovative ways to display their ads. Use of rich media is one such new tactic that involves using interactive elements such as video, audio, and clickable elements to make the advertisement more engaging.

Interstitial ads

These are ads that appear as a separate webpage before you are directed to the original page that you wanted to visit on the internet. They are effective in capturing the user's attention as they take up the entire screen.

Video ads

When it comes to display advertising costs, video ads are slightly more expensive but worth it. Platforms like YouTube and Instagram have made it convenient for marketers to run video ads and attract a lot of attention and engagement.

Web Analytics

Web analytics in digital marketing is the process of collecting, analysing, and reporting on website

data to understand user behaviour and optimize online performance. It provides valuable insights into how users interact with a website, enabling businesses to make data-driven decisions to improve the user experience, marketing campaigns, and overall business outcomes.

the user experience, marketing campaigns, and overall business outcomes.

Here's a more detailed breakdown:

What it is:

- **Measurement:**

Web analytics involves tracking various metrics on a website, such as page views, traffic sources, user behaviour, and conversions.

- **Analysis:**

This data is then analysed to identify trends, patterns, and areas for improvement in website design, content, and marketing strategies.

- **Reporting:**

The findings are compiled into reports that provide actionable insights for stakeholders.

Web Analytics Importance in digital marketing:

- **Understanding user behaviour:** Web analytics helps marketers understand what attracts visitors, how they navigate the site, and what content resonates with them.
- **Optimizing campaigns:** By analysing campaign performance, marketers can identify what's working, what's not, and adjust improve ROI.
- **Improving user experience:** Web analytics data can reveal areas where the website is difficult to use, leading to changes that enhance the user experience.
- **Driving business goals:** Ultimately, web analytics helps businesses achieve their goals, whether it's increased traffic, higher conversion rates, or more sales.

Key metrics in web analytics:

- **Traffic sources:** Where visitors are coming from (e.g., search engines, social media, referrals).
- **Page views:** How many times each page is viewed.
- **Bounce rate:** The percentage of visitors who leave after viewing only one page.
- **Conversion rate:** The percentage of visitors who complete a desired action (e.g., purchase, sign-up).
- **Time on page:** How long visitors spend on each page.
- **Exit pages:** Which pages visitors leave from.

Usage:

- **Marketers:** To evaluate campaign effectiveness, optimize website content, and improve user engagement.
- **UX designers:** To understand how users interact with the website and identify areas for improvement in the user interface and user experience.
- **eCommerce businesses:** To track product performance, optimize website navigation, and improve the checkout process.
